INDUSTRIAL CARTS

PALLET RACK DECKING

PALLET RACKING

SHELVING SYSTEMS

CABINETS

INDUSTRIAL STORAGE CABINETS

Industrial Storage Cabinets are a great, economical way to store large items. These cabinets are made with high-quality engineering in mind, and can withstand a beating.

- Lifetime warranty
- Up to 72 inches wide and up to 72 inches tall
- 36 inches deep to provide extra storage space
- Add drawers, shelves, compartments, & other features
- Custom to your specifications: wider, deeper, taller, or narrower, shallower, & shorter

STAINLESS STEEL CABINETS

Stainless Steel Cabinets and Work-spaces can cater to specialty applications that require sanitized stainless steel surfaces.

- Lifetime warranty
- Extra heavy-duty 12 gauge stainless steel
- Up to 72 inches wide and up to 72 inches tall
- 24 inches deep to provide storage without taking up too much of your shop floor
- Adjustable shelving, add/remove shelving, & added security behind 3-point locking device
- Add drawers, shelves, compartments, & other features
- Custom to your specifications: wider, deeper, taller, or narrower, shallower, & shorter

LEAN CABINETS

The Strong Hold Lean Series is here to set a higher standard for industrial-grade storage. With a wide selection of colors, configurations and an industry-leading warranty, the Lean Series gives you the storage you deserve at the price you want.

- 25-Year warranty
- All-welded construction, 14-gauge stainless steel
- Up to 60 inches wide and up to 72 inches tall
- 24 inches deep to provide storage without taking up too much of your shop floor
- Adjustable shelving, add/remove shelving, & added security behind 3-point locking device
- Custom to your specifications: wider, deeper, taller, or narrower, shallower, & shorter
- Watch product features here: [VIDEO](#)

LOCKERS

INDUSTRIAL LOCKERS

Several options are available to configure the perfect locker for your needs! Begin with choosing the locker tier you need and from there narrow down your width, depth, and height. Further customize your locker with either 6" legs or a continuous z-base, flat top or sloping hood.

- Built to last; customizable
- ADA accessible compartments to meet building requirements
- Intermediate cross members (ICM) for added security on multiple tier lockers are also available
- Door frame with overlapping and welded corners
- Reinforced bottom channels

STORAGE LOCKERS

WireCrafters RapidWire™ Industrial Storage Lockers are a perfect solution for securing employee items or company equipment. Stored items are not accessible, but remain visible when placed inside the storage locker. The open but secure welded mesh design allows in-plant lighting, ventilation, and fire suppression systems to work effectively throughout the storage area.

- Easily reconfigurable; lockers set up fast, and can be moved or reconfigured as facility needs change
- Increase accountability; controls company equipment and assigns individual responsibility to workers
- Monitor stored items; wire mesh design allows managers and workers full visibility of what is being stored

LOCKER SYSTEMS

These metal employee lockers provide high density storage for individual belongings and supplies.

- Provides coat storage, lockable compartments for up to 16 people, and space saving solutions
- Uses only 1 square foot of space per person
- Louvers for ventilation

CONTAINERS

PLASTIC CONTAINERS

Organize your small parts storage and anything the like with plastic part containers from Barron Equipment & Overhead Doors! These containers are made from a high-grade plastic that can withstand a beating. AkroBin containers can even be integrated into a previously installed container management system!

- Heavy-duty, grade polymer bins
- Stackable or hangable on louvered racks and panels, rail racks, storage cabinets, and louvered carts for high-density storage
- Corrosion-proof and unaffected by weak acids and alkalis
- Dividers, lids, labeling, and color options available
- Watch product features here: [VIDEO](#)

WIRE CONTAINERS

These collapsible wire containers are great for holding larger items, and can be easily stowed away when they're not needed! When the time comes, these containers can be reassembled in a jiffy, and can hold great amounts of weight.

- Quick assembly and can be stacked 4 high
- Size options from Junior-Duty Folding Light-Duty Folding, and Heavy-Duty Folding containers holding anywhere from 1,000-6,000 pounds
- Fully customizable options available
- Pallet Surround container offers flexibility of transforming an open pallet to a four walled bulk container
-

SELF-DUMPING HOPPERS

Make scrap and trash removal a breeze with these Self-Dumping Hoppers. These hoppers stand upright as any other trash container would, and can easily be tilted down to remove the trash with no work at all. These containers can also be carried and dumped by forklifts, making the process even easier.

- Built to last
- Over 60+ models available
- Standard units, narrow. low profile, large-volume, or custom manufacture
- Versatile and customizable
- Can handle sharp object, toxic materials, or other risky waste without endangering the handler

INDUSTRIAL CARTS

STAINLESS STEEL TOOL CARTS

Our tool carts keep valuables safe. Their rugged design makes these cabinets the ideal maintenance work stations on wheels.

- Heavy-duty 21 gauge stainless steel
- Add or remove bins, shelves, and custom models come with vise shelf for extra top space
- Swivel with brake and ridged polyurethane casters make maneuvering easy
- Can withstand a 2,000 pound load
- Handle provided for steering
- Custom tool cart models available including maple wood top and sleek designs

MAINTENANCE CARTS

Our tool carts keep valuables safe. Their rugged design makes these cabinets the ideal maintenance work stations on wheels.

- Constructed using 12 gauge steel and feature a 7 gauge work top with side and back guards to prevent tools and parts from falling off
- Swivel with brake and ridged polyurethane casters make maneuvering easy
- Can withstand a 2,000 pound load
- Handle provided for steering

SERVICE CARTS

These service carts make mobility of heavy machine parts and tools and dies from shop to assembly areas easy.

- Come with 2-3 welded shelves
- Handle provided for steering
- Can withstand a 2,000 pound load
- Shelves have 3 inch lip to keep items on the cart
- Swivel with brake and polyurethane casters to make maneuvering easy

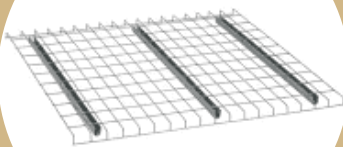

PALLET RACK DECKING

WIRE MESH DECKING

Cost effective galvanized wire mesh deck used with pallet racks. Each deck is reinforced with formed galvanized steel channels that are welded to the wire mesh. Wire decking is strong, safe and easy to install.

- Custom to your specifications and zinc coated for protection
- Based on your requirements such as rack configuration, size, and working load, wire and channel gauges are selected along with the pattern and number of channels needed to provide the desired end result
- Various configurations available: standard waterfall, inside waterfall, single rivet shelving, and double rivet shelving
- Mesh patterns and channel options: universal flange, standard channel, and inverted
- Accessory options: box stop, flue space divider, clip divider, hanging divider, galva-stop, and wire clips

WELDED WIRE DECKING

Make worrying about Pallet Rack Storage a thing of the past with this Pallet Rack Decking. This modular decking spans half the length of a typical pallet rack, and can be cut to any length to fit your racks.

- We offer a variety of sizes, capacities, and custom configurations to accommodate any rack and any application
- This welded wire decking is available in a number of finishes
- choose from: oven-baked gray enamel, powder coated, hot-dipped galvanized, pre-galvanized or electro-zinc plated finishes

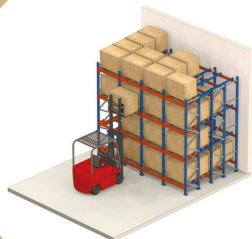

PALLET RACKING

CANTILEVER RACKING

Cantilever Racking from Barron Equipment is a great, economical way to store large inventory. Primarily used with building material storage, these racks can be customized to fit almost any length and size of material to work around your workflow.

- From Medium duty to Extra Heavy duty
- A wide range of base sizes allows custom designing of rack systems to your individual needs
- Uprights are punched on both sides for versatility and can be used single sided or double sided depending on the size of base used
- Heavy duty steel construction permits storage of tubes, bars, structural and other long heavy items that must be kept off the floor; bases can be used for extra storage

DRIVE-IN RACKING

Drive-In Racking from Barron Equipment & Overhead Doors is an extremely efficient way to store large amounts of items within your warehouse. These racking systems eliminate the need for aisles, which can increase your storage space by more than 35%.

- LIFO/FIFO (last in, first out/first in, first out) configurations
- Reduces space, cuts cost, and holds more loads with its deep lane storage
- High volume, low SKU
- Eliminates the need for multiple aisles
- Provides control over entry and exit
- Favors density as opposed to the selectivity of Selective Pallet Rack
- Designed specifically to suit your pallets and forklifts

FLOW RACKING

Keep important products front and center with flow racking from Barron Equipment & Overhead Doors! This racking includes rollers that move product to the front end of the racking when the front-most product is removed.

- Maximized Vertical Space – Less pitch frees up vertical space to accommodate more levels
- Cost Savings – Bearing rollers can often be spaced further apart saving on overall system costs
- Increased Efficiency – Smooth, consistent and faster with fewer hang-ups

PALLET & BOX HANDLING EQUIPMENT

PALLET JACKS

PALLET POSITIONING

PALLET ROTATERS

PALLET PAL

VACUUM LIFTS
& MAGNETS

PALLET JACKS

POWERED

High flexibility and efficiency - Panther Maxi moves many different pallets in very confined areas both easily and quietly. The design puts focus on the safety and ergonomic working conditions of the user. As an example, the ergonomically correct handle ensures the user a relaxed hold.

- Capacity-4000lbs.
- AC-technology (Curtis Controller)
- Long operating time per charge
- Easy setting of e.g. driving speed, acceleration and deceleration
- Soft accelerationSpeed control
- Low use of power
- Motor brake
- Safety button can be activated in all positions
- Central location of control buttons

MANUAL

The ETT pallet truck is very maneuverable and can contribute to a better utilization of space in storage and production areas.

- Special lowering valve to control the lowering function
- High-pressure relief valve to prevent overload
- Strong
- Long operating life
- Low maintenance costs
- Reliable leak-proof hydraulic system
- Short length behind forks
- Tight turning angle

PALLET POSITIONING

MANUAL

Spring Load Levelers improve the efficiency and productivity of manual pallet loading and unloading operations. A system of springs and shock absorbers lower or raise loads as boxes are added or removed from pallets. The built-in turntable ring allows workers to spin the load so that work is always being done on the nearside.

- Tubular steel frame holds loads up to 4,500 lbs
- Heavy-duty springs automatically adjust pallet height
- Dampener provides smooth, gradual raising and lowering, without overshoot or bounce
- Integrated turntable ring
- Phenolic frame cover (optional)
- Fork pockets for relocation by fork truck
- No lagging necessary
- Leveling feet (optional) allow use on sloping or uneven floors

POWERED

The PalletPal 360™ Air is a pneumatic palletizer that makes loading and unloading pallets faster, safer and easier.

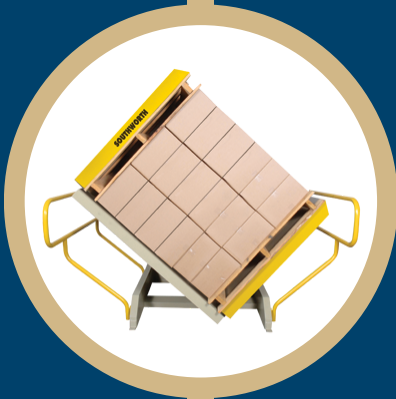

- Heavy-Duty Airbag Automatically Load Height Adjusts as Boxes are Added or Removed
- Works with Loads from 400 - 4500 Lbs.
- Turntable Ring Spins Loads for Easy Access
- Fork Pockets for Easy Relocation
- Low-friction bearing supported turntable for near-side loading and unloading
- Portable - Requires no electrical power; simply inflate the airbag with shop air or a portable compressor and use it anywhere
- Fork channels for relocation by fork truck
- Leveling feet allow use on sloping or uneven floors.

STACKERS

Southworth manual stackers feature a rugged, ergonomic design. They are extremely simple to use, highly maneuverable and available in capacities up to 3,000 lbs. with lifting heights up to 80".

- 2200 and 3000 Lb. Capacity
- Available in Fork Over and Straddle Configurations
- Lifting Heights to 80"
- Dual Wheel Steering for Excellent Maneuverability

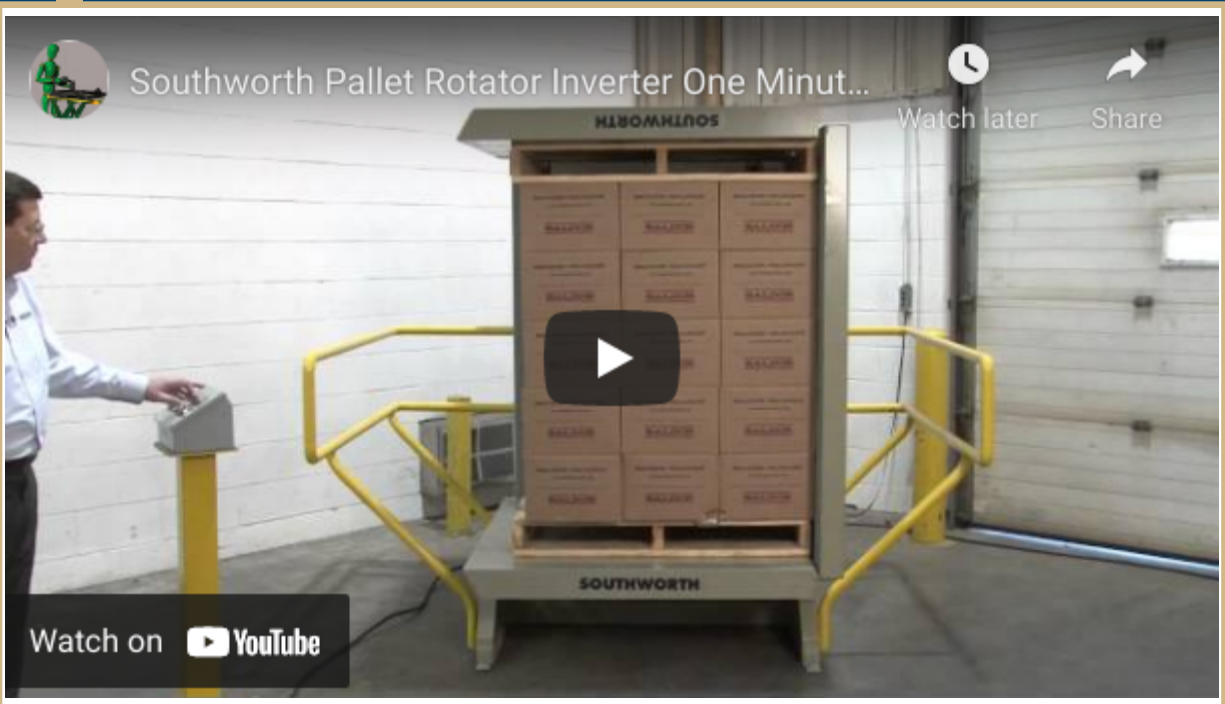

PALLET ROTATORS

SOUTHWORTH PALLET ROTATOR

With the ability to handle pallet loads measuring up to 48" x 48" x 84" high, the Southworth PalletPal Pallet Rotator / Pallet Inverter is a simple, rugged machine designed to invert entire pallet loads. The pressure adjustable clamping mechanism easily secures loads up to 4,400 pounds and rotates them 180 degrees on a massive anti-friction turret bearing. The PalletPal Pallet Rotator / Pallet Inverter eliminates the need for manually restacking pallets.

- Replace broken pallets
- Switch loads to/from in-house or shipping pallets
- Transfer from pallets to slip sheets
- Replace damaged goods at the bottom of the load
- Invert an entire load in just seconds
- Faster, safer and easier than manually restacking
- Works with loads up to 4400 lbs.
- Adjustable Clamp Pressure

PALLET ROTATER IN BAKERY

PALLET PAL

SOUTHWORTH PALLETPAL 360

The PalletPal 360™ Spring Pallet Positioner / Level Loader is the original, automatic, self-leveling, spring pallet leveler that makes loading and unloading pallets faster, safer and easier. This simple, automatic load leveler uses a system of springs and shock absorbers to lower and raise loads as boxes are added or removed from pallets. A turntable top allows nearside loading and unloading. No power or air supply is required.

- Self-Leveling action no operator adjustments require
- Rugged tubular steel frame for loads up to 4,500 lbs.
- Heavy-duty springs calibrated to bring pallet to most convenient height
- Proven linkage design maintains level under uneven loading
- Dampener provides smooth, gradual raising and lowering, without overshoot or bounce
- Low-friction bearing supported turntable for near-side loading and unloading
- Phenolic frame cover (optional)
- Fork pockets for relocation by fork truck also extend base for free standing stability
- Leveling feet (optional) allow use on sloping or uneven floors
- Free standing, can be easily relocated by fork truck.

PALLETPAL FOR HEAVY REFRIGERATED OR FROZEN FOODS

VACUUM LIFTS & MAGNETS

VACUUM LIFTS

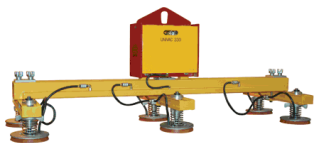

UniMove is the original "Made in America" vacuum tube lifter and has been the benchmark of the industry for over 22 years. At that time UniTech introduced a new lift tube construction which consisted of high tensile wire enclosed in neoprene impregnated cloth, and an outer wrap of polyester tape. This was the highest technology of the time, but the tube was still one of the more frequently replaced components for all vacuum tube systems.

- Available in standard lengths of 108" and 120", and can be ordered in any custom length to match existing tubes.
- The new tube technology includes integral fitted cuffs which allow for fast and easy mounting.
- The new Rhino Tube is available in UNIMOVE's exclusive Hi-Viz yellow, which is the safest color when moving product within a process area.

MAGNETS

For lifting long, wide, and moderate weight material or to provide increased support of thin material.

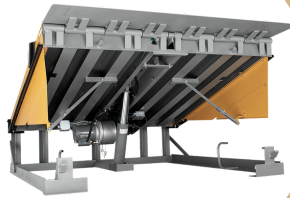

- Ball mounted vacuum pads
- Brass fittings
- Push lock hose - designed for 250 psi
- Slide valves allow for manual isolation of vacuum pads
- Muffler/filter is spin on type for easy change out
- Standard load beam lengths of 5', 6', 8', 10', 12' and 15', other sizes available, consult Barron

DOCK
ACCESSORIES

BUMPERS & LOADING DOCK ACCESSORIES

DURABLE LOADING DOCK BUMPERS

Loading Dock Bumpers protect your loading docks by providing a soft impact point for trucks entering your dock. Without these bumpers, damage to both your building and trucks can occur. Dock Bumpers eliminate this damage, as they act as a barrier between the building and vehicle. Barron Equipment Company provides a large selection of Dock Bumpers with various sizes.

- Provides maximum protection with a unique "loop" design of bumper pads
- Steel-face plate makes the Dura-Soft bumper ideal for use in docking areas where excessive friction from up-and-down trailer movement occurs
- Can be used in any material-handling system area where heavy-duty protection is required
- Unparalleled ability to deflect and absorb with loop design laminated bumper beneath a floating steel-face
- Comes in a wide variety of models and can be mounted in various heights, from flush mount to 12" above dock, depending on highest impact area

LOADING DOCK ACCESSORIES

Loading Dock Accessories provide safety and functionality for your loading dock. These accessories maximize efficiency, and reduce worker fatigue.

- Weather seals are great for eliminating outside elements from permeating your loading dock and causing damage
- Door Fangs save on heating and cooling costs for loading docks. These are inserted into the dock door, and are wedged into gaps between the dock leveler deck and curb angles to block the exchange of air between the dock and outside
- Trailer Dock Lights illuminate the inside of trailers, eliminating the guess of what the trailer contents are. These lights are mounted on articulating arms, making the light easy to manipulate
- We offer many more accessory options including: dock blankets, dock opening barriers, guide lights, safety communication lights/dock alert, and wheel chocks.

DOCK LEVELERS

POWERAMP AIR POWERED LEVELER

Air-Powered Dock Levelers use compressed air already available in your loading dock, and are electronically operated by a dock controller.

- Optional inter-lockable electrical push button controls
- Pneumatic push button operation
- Air bellows lifting systems
- Pull chain activation
- Four sided box construction
- Sliding style toe guards
- Simple two way air valve

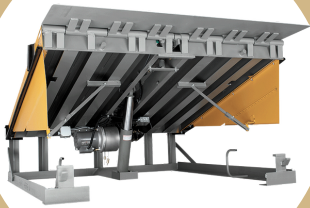

POWERAMP EDGE OF DOCK LEVELER

Edge of Dock Levelers are an economical way to have a smooth transition surface from dock to trailer. These levelers are powered by either electricity, or human power. Because of their small size, these can be installed where normal levelers may not fit.

- Lip hinge tubes include grease fittings
- Maximum operating range
- Never lift option
- Hydraulic option
- Milled lip option
- Safe and easy operation

DOCK LEVELERS

POWERAMP HYDRAULIC LEVELER

Spring Load Levelers improve the efficiency and productivity of manual pallet loading and unloading operations. A system of springs and shock absorbers lower or raise loads as boxes are added or removed from pallets. The built-in turntable ring allows workers to spin the load so that work is always being done on the nearside.

- Tubular steel frame holds loads up to 4,500 lbs
- Heavy-duty springs automatically adjust pallet height
- Dampener provides smooth, gradual raising and lowering, without overshoot or bounce
- Integrated turntable ring
- Phenolic frame cover (optional)
- Fork pockets for relocation by fork truck
- No lagging necessary
- Leveling feet (optional) allow use on sloping or uneven floors

POWERAMP MECHANICAL LEVELER

Spring Load Levelers improve the efficiency and productivity of manual pallet loading and unloading operations. A system of springs and shock absorbers lower or raise loads as boxes are added or removed from pallets. The built-in turntable ring allows workers to spin the load so that work is always being done on the nearside.

- Tubular steel frame holds loads up to 4,500 lbs
- Heavy-duty springs automatically adjust pallet height
- Dampener provides smooth, gradual raising and lowering, without overshoot or bounce
- Integrated turntable ring
- Phenolic frame cover (optional)
- Fork pockets for relocation by fork truck
- No lagging necessary
- Leveling feet (optional) allow use on sloping or uneven floors

SHELTERS & SEALS

FAIRBORN DOCK SHELTERS

Dock shelters from Barron Equipment Company are a great way to protect dock personnel and equipment from outside elements. Because the entire back of the truck is enclosed by the shelter, leakage of water and heat is kept to a minimum.

- The Series 3000 may be an alternate selection when space limitation or other considerations preclude the use of a rigid frame dock shelter
- The shelter is normally in the extended position and utilizes spring tension to hold the curtains tight to the truck body upon vehicle entry
- A split head curtain further adds to this unit's versatility in servicing a wide range of vehicles
- A combination of our superior performance materials guarantees this unit will withstand the most demanding requirements
- Rigid, soft-sided, and flexible shelter styles available

FAIRBORN DOCK SEALS

Dock seals provide a soft matting surface for the back of trailers backing into your loading dock. This protects both the trailer and your building, from damage caused by high-momentum impacts. Barron Equipment Company is a proud vendor of Fairborn and NOVA dock seals.

- The Series 1400 accommodates a wide range of vehicle and door height variations by the means of a full width head curtain, held taut by tension straps at each end
- The supported head curtain is sloped to ensure adequate drainage
- A split curtain, adjustable by the means of pull ropes and an intermediate foam pad are a few of the head curtain options
- Visit our website to see the variety of styles available

TRUCK RESTRAINTS

POWERAMP AUTOMATIC TRUCK RESTRAINT

The TPR UniLock® is the only trailer-positioned vehicle restraint that can automatically remove "RIG Wedge" pressure. RIG Wedge is caused when the trailer is pushed forward during loading/unloading and the trailer's Rear Impact Guard (RIG) applies so much pressure to the restraint's hook that the truck driver must reverse the trailer in order to release the restraint. The UniLock has an advanced cam design that first rotates the hook away from the RIG to remove the pressure, and then rotates down to a stored position.

- The UniLock vehicle restraint also has an internal safety mechanism that locks the restraint's hook in place when pressure is applied, maintaining a secure engagement
- This makes it universally effective on any obstructed Rear Impact Guard (RIG), including intermodal trailers with cover plates that prevent the restraint's hook from latching on top of the RIG
- The UniLock is designed to withstand a pulling force in excess of 32,000 lbs, and has a service range of 4" to 10" horizontally from the face of the dock bumpers and 9" to 30" vertically above drive approach

LOAD & LOCK

The Patent Pending NOVA Lock & Load™ Vehicle Restraint with Roller Slope Extension is designed to secure a trailer to a loading dock by engaging the trailer's Rear Impact Guard (RIG) with a large, rotating hook operated by a control panel mounted inside the building. The Roller Slope Extension is designed to decrease resistance of carriage travel while it is adjusting to the height of the RIG on the trailer thereby saving wear on the RIG, carriage and pavement.

- The gear motor, specifically engineered for this application, utilizes a one way braking system which keeps the hook continuously engaged for added safety
- Roller slope extension that effortlessly rolls on pavement
- Control box has standard horn override feature for authorized personnel
- LED lights are standard for energy efficiency and long life

PORTABLE DOCK PLATES

SPRING LOADED ALUMINUM DOCK PLATES

A Spring Loaded Dock Plate (SL Plate) solves a problem in some common situations. Many times a dock services the exact same truck or type of trucks several times per shift. If the loads are loaded or unloaded by handtruck, dollie or other manual methods the SL plate may be the answer.

- The aluminum dock plate is fitted with a pair of spring loaded attachments that fix it in place to the dock floor
- These springs allow the dock plate to be quickly and safely lowered into place for use
- When finished the dock plate is lifted, aided by the springs, into its vertical storage position ready for the next truck
- It is mounted top of dock so there is no major installation process

STANDARD/MINI LOADING RAMPS

Don't interpret incorrectly that small means "not as tough". There are a world of applications that have a target height that is one-half or less of normal dock height. When your high side is 32" or less you might consider this economical solution.

- Curb design same as Full Size Ramp
- 8" of curb above drive surface
- Steel Diamond Deck Approach Plates (top & bottom)
- Serrated steel grating for traction & self cleaning
- Capacities from 12,000 lbs to 60,000 lbs

YARD RAMPS

The portable steel yard ramp allows for traffic to move from the dock level down to the ground or from the ground up into the back of a truck, which helps loading/unloading flow smoothly. The 18" industrial solid rubber pneumatic tires allow for easy movement of the yard ramp around your shipping yard to have you ready in minutes to begin loading/unloading. The hydraulic adjustment system permits fast reliable height adjustment of the yard ramp with virtually any trailer bed height.

- Versatility is paramount in a yard ramp
- High visibility 8" yellow run-off guards
- Heavy-duty structure
- Tow clamp

DOORS

FREEZER/FIRE DOORS

CONVEYORS

BELTED

According to Wikipedia a sale is the exchange of a commodity or money as the price of a good or a service.

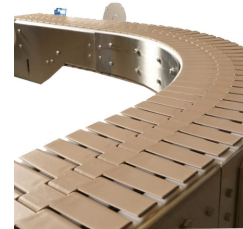

GRAVITY

Why motorize conveyors when gravity can do the work for you? This large selection of Gravity Conveyors from Barron Equipment Company range in size and capacity to provide for any application.

POWERED

Whether you are wanting to move product across your production floor, or to ascend to new heights, Barron Equipment has you covered. Our large selection of powered conveyors allows your production facility to operate with ease and efficiency.

NON-POWERED

Food Conveyors from Barron provide an efficient, economical, and most importantly, safe way to transport food products around your production facility. From delivering large amounts of raw materials to offloading consumer-ready products to be packaged, Barron has you covered!

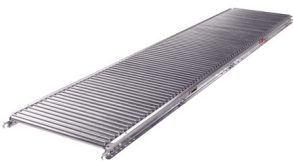

BELTED & GRAVITY

BELTED

Spring Load Levelers improve the efficiency and productivity of manual pallet loading and unloading operations. A system of springs and shock absorbers lower or raise loads as boxes are added or removed from pallets. The built-in turntable ring allows workers to spin the load so that work is always being done on the nearside.

- Silent continuous transport
- Require less manpower
- Less accident prone
- Require simple arrangement both at landing and unloading ends
- Multipoint loading is convenient
- Energy efficient compared to other means of transport because high payload to total load ratio
- Less prone to breakdowns

GRAVITY

Why motorize conveyors when gravity can do the work for you? This large selection of Gravity Conveyors from Barron Equipment Company range in size and capacity to provide for any application.

- They are cost effective because they require no power to work effectively.
- Easy to install, and only require basic maintenance.
- They can be used in a variety of environments and fit into even awkwardly shaped rooms.
- Gravity conveyors are easy to fit into a powered conveyor system.

POWERED & NON POWERED

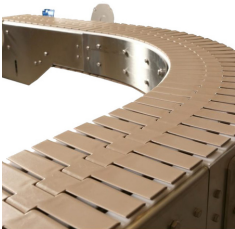

POWERED

Whether you are wanting to move product across your production floor, or to ascend to new heights, Barron Equipment has you covered. Our large selection of powered conveyors allows your production facility to operate with ease and efficiency.

- Effective horizontal transportation over a longer distance
- The speed and also the process can be easily controlled and the risk for damage is reduced as the parts never touch
- The small zones of the system are powered independently and can be set up to run only when an item is present
- If a motor breaks down, it will only stop one zone

These are just a few of our options, but we have several more to choose from on our [website](#). Custom options are available!

NON POWERED

Our large selection of non-powered conveyors can give you a much more affordable option while still getting the job done.

- Non-powered gravity conveyors are designed to handle a wide range of sizes and weights.
- Non-powered gravity roller conveyors are most cost effective when correctly applied to an application.

CASTERS

SUCCESS STORY

ISSUE

One of our clients was having issues with their current Brand X Casters. They were not meeting the ergonomic standards when it came to push/pull force. They had a hard time getting the carts moving! We decided to do some testing with both their casters and our own casters to come up with a solution that was more ergonomically friendly.

SOLUTION

We thought it would be a good idea to try Brand Y Caster which would roll easier over the terrain and because of the strong rebound resiliency and tear resistance it would last longer. In order to ensure no other issues would come about we wanted to make sure the rigs would not cause an issue anymore either as shown in the picture they are rusting out from the wash down bays during the process.

[FREE CONSULTATION](#)

Barron Equipment is dedicated to finding the right solution for you no matter the circumstance or application; we will try every option until we find what works. Set up a free consultation today by using the button above.

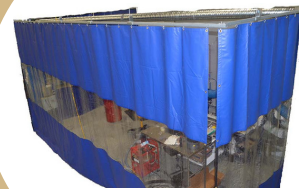

WAREHOUSE SPACE MANAGEMENT

VRC &
MEZZANINES

MODULAR
BUILDINGS

CURTAIN
WALLS

GUARD RAILS &
BOLLARDS

OPERABLE &
MODULAR WALLS

VRC'S & MEZZANINES

VRC

One modern implement is the VRC, or vertical reciprocating conveyor. These conveyors are designed to move items up and down to different levels of storage. Making use of mechanical and hydraulic mechanisms, they are, in essence, elevators for inventory.

- Perhaps the greatest benefit of vertical conveyors is that they're extremely safe to operate.
- Vertical lifts can be made with all different types of materials to ensure that they avoid harmful disaster. They can hold various amounts of weight, meaning that you can have one custom made to safely hold the items that you deal with.
- While they can initially be a little more expensive than forklifts, vertical lifts will pay themselves off hundreds of times over as time passes by because they have much lower costs of operation and maintenance.
- Having a material handling vertical lift in place at your warehouse will ensure a consistent workflow at all times. A forklift can not match this efficiency because they are operated by humans and people are inherently prone to error.
- Easy to install and designed to fit your exact needs.

MEZZANINE

A mezzanine is a storage system that allows you to increase your floorspace by utilizing the height of your warehouse. Build up not out!

- Increased storage space: A mezzanine uses the vertical space of your warehouse to open up room on the floor level. Installing a mezzanine could double or triple the square footage of your storage space.
- Customization: A mezzanine can be custom-designed to meet the exact specifications of your warehouse. This can be especially useful for buildings with angled or curved walls.
- An alternative to relocation: Relocating can be time consuming and expensive. But by installing a mezzanine, you can stay in your current space and achieve the additional storage you need.

CURTAIN WALLS

INSULATED STRIP CURTAINS

If you've ever worked in a kitchen, a warehouse, or factory, chances are you've seen PVC strip curtains in the wild. If you haven't worked in these places, you may have come across them in other places, such as walk-in freezers in some grocery stores, some restaurant or bar entrances, or any number of other locations.

- allow the efficiency of a door with the convenience of not having to open or close it.
- PVC strip curtains are often used at loading docks to prevent the escape of air conditioned air, which can help manage utility costs and can help keep debris outdoors from getting in.
- They also save energy. Whether you want to keep cool air or warm air inside, the curtains do a great job of stopping the conditioned air from escaping outside. This can save your business a lot of money, since you can lower or raise the temperature of your facility while not losing that air to leakage at doors.
- The curtains are ideal for separating work areas that may cause contamination otherwise.
- When forklifts have to stop at doorways to wait for a door to manually open, time is lost, and even though it may only be a few seconds here or there, that time can add up quickly.

CLEAN SCREEN CURTAINS

Workers are constantly operating equipment, people are coming in and out of areas, and dirt and debris inevitably enters the building. To resolve all of the issues associated with warehouses, building owners can have high-quality warehouse curtain dividers installed throughout the facility.

- Industrial curtain walls effectively divide warehouse spaces to control sound. By reducing the noise distractions, curtain walls can also promote employees' productivity and focus levels.
- By designating specific areas within your warehouse with divider curtain walls, you can maintain messes and keep the rest of the facility clean to limit pollution.
- If guests are planning on visiting your facility but you don't want to reveal a specific area—perhaps because of a sensitive project in the works—warehouse divider curtains can section off your particular space, all while maintaining the professional appearance.

GUARD RAILS & BOLLARDS

GUARD RAILS

Warehouse guardrails help define and protect areas in your warehouse and are the perfect safeguard around machinery, loading areas, and inventory areas. Guardrails provide floor-level protection, such as at the end of pallet racking rows, or along building walls. They also help define pedestrian walkways and protect machinery, electrical panels, and walls.

- An essential safety solution for any warehouse, guardrails help to provide a protective barrier against potential hazards. They help to reduce collisions that lead to damaged equipment and lost inventory, and also help to provide separation of workers and potentially dangerous areas like electrical equipment or hazardous materials.
- Installing guardrails also can improve the mobility of machine operators by separating low and high-speed areas to improve the flow of traffic. They also help to serve as a visual guide due to their bright colour, which helps workers distinguish between different areas of your facility.
- By improving productivity and safety, guardrails can effectively lessen overhead expenses by cutting down on repairs and other associated costs. In addition, the buffer between your equipment and products will also help prevent loss of inventory and reduce recoup costs.

BOLLARDS

Our large selection of non-powered conveyors can give you a much more affordable option while still getting the job done.

- No more damage to bollards and barriers when impacted.
- No more damage to forklifts.
- No more damage to floors.
- Colored polymer material requires no repainting or touchups.
- High return on investment: all the technical advantages of flexible collision protection products over traditional steel alternatives, a return on investment in most busy facilities is often seen within the first 2 or 3 years.
- Food and beverage industry-safe - Easy to clean, no FOD or foreign debris.
- Long lifespan: though lifespan is determinate on many individualized factors in your facility- A-Safe devices have been shown to last far longer than steel alternatives and thus save money on replacement or repair.

OPERABLE & MODULAR WALLS

OPERABLE WALLS

Provide semi-permanent partitions to your office/warehouse space. These walls can either be permanent-in-place, or can be moved to different positions.

- **Flexibility:** Since these walls are not permanent and they're completely reusable, they offer a partitioning solution that can adapt to any changes in the future, such as a rebuild or floor change.
- **Space Control:** One of the most benefited functions of warehouse partitioning systems is that they can efficiently separate a building that has one or more tenants. Since they're also easily changed, they don't place any hindrance to new lease and space agreements between tenants.
- **Less Down Time:** Typical wall construction results in closing off specific areas, large messes, noise, and piles of waste that can affect workflow. Prefab walls go up easily and without a mess, and take a fraction of the time -- meaning you can get back to work quicker.

MODULAR WALLS

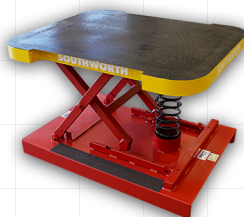

Our large selection of non-powered conveyors can give you a much more affordable option while still getting the job done.

- Quick and clean installation guarantees you faster occupancy with no downtime or intrusions to your daily business.
- 100% reusable and reconfigurable, excellent ROI.
- NO messy patching or painting, virtual maintenance free.
